Hepatitis A is caused by the hepatitis A virus (HAV), which is spread through contact with contaminated food or water. Hepatitis B is caused by the hepatitis B virus (HBV), which is spread through contact with infected blood or other bodily fluids. Hepatitis C is caused by the hepatitis C virus (HCV), which is spread through contact with infected blood.

What are the symptoms of hepatitis?

The symptoms of hepatitis can vary depending on the type of hepatitis virus. However, some common symptoms include:

* Fatigue * Nausea * Vomiting * Abdominal pain * Dark urine * Light-colored stools * Jaundice (yellowing of the skin and eyes)

How is hepatitis diagnosed?

Hepatitis is diagnosed through a blood test that checks for the presence of hepatitis viruses.

How is hepatitis treated?

The treatment for hepatitis depends on the type of hepatitis virus. Hepatitis A is usually treated with rest and supportive care. Hepatitis B can be treated with antiviral medications. Hepatitis C can be treated with antiviral medications or interferon.

How can hepatitis be prevented?

There are several ways to prevent hepatitis, including:

* Getting vaccinated against hepatitis A and B * Avoiding contact with contaminated food or water * Avoiding contact with infected blood or other bodily fluids * Practicing safe sex * Getting tested for hepatitis if you are at risk
