

Hepatitis: STD Briefs for Teens & Young Adults

What is Hepatitis?

Hepatitis is a serious liver disease that can be caused by different viruses. The most common types of hepatitis are hepatitis A, B, and C. Hepatitis A is spread through contact with contaminated food or water. Hepatitis B is spread through contact with infected blood or bodily fluids. Hepatitis C is spread through contact with infected blood.

Symptoms of Hepatitis

The symptoms of hepatitis can vary depending on the type of hepatitis virus. Some people with hepatitis may not have any symptoms, while others may experience mild to severe symptoms. Common symptoms of hepatitis include:

* Fatigue * Nausea * Vomiting * Abdominal pain * Dark urine * Light-colored stools * Jaundice (yellowing of the skin and eyes)

Treatment for Hepatitis

The treatment for hepatitis depends on the type of hepatitis virus. There is no cure for hepatitis A, but the symptoms can be managed with rest and supportive care. Hepatitis B can be treated with antiviral medications. Hepatitis C can be treated with antiviral medications or a combination of medications and interferon.

Prevention of Hepatitis

There are several things you can do to prevent hepatitis, including:

* Get vaccinated against hepatitis A and B. * Practice safe sex. * Do not share needles or other drug paraphernalia. * Get tested for hepatitis if you are at risk.

If You Have Hepatitis

If you have been diagnosed with hepatitis, it is important to follow your doctor's Free Downloads and take your medications as prescribed. You should also get regular checkups to monitor your liver function. Hepatitis can be a serious disease, but it can be managed with proper treatment and care.
