JS

Variables in javascript are like containers that hold some value to be used further in the program.

A variable can store any type of data in javascript: number, string, array, object, etc.

A variable can be created using `let`, `var` or `const` keyword.

```
let name;
```

```
var age;
```

```
const lang;
```

Storing value:

```
name = 'John';
```

```
age = 32;
```

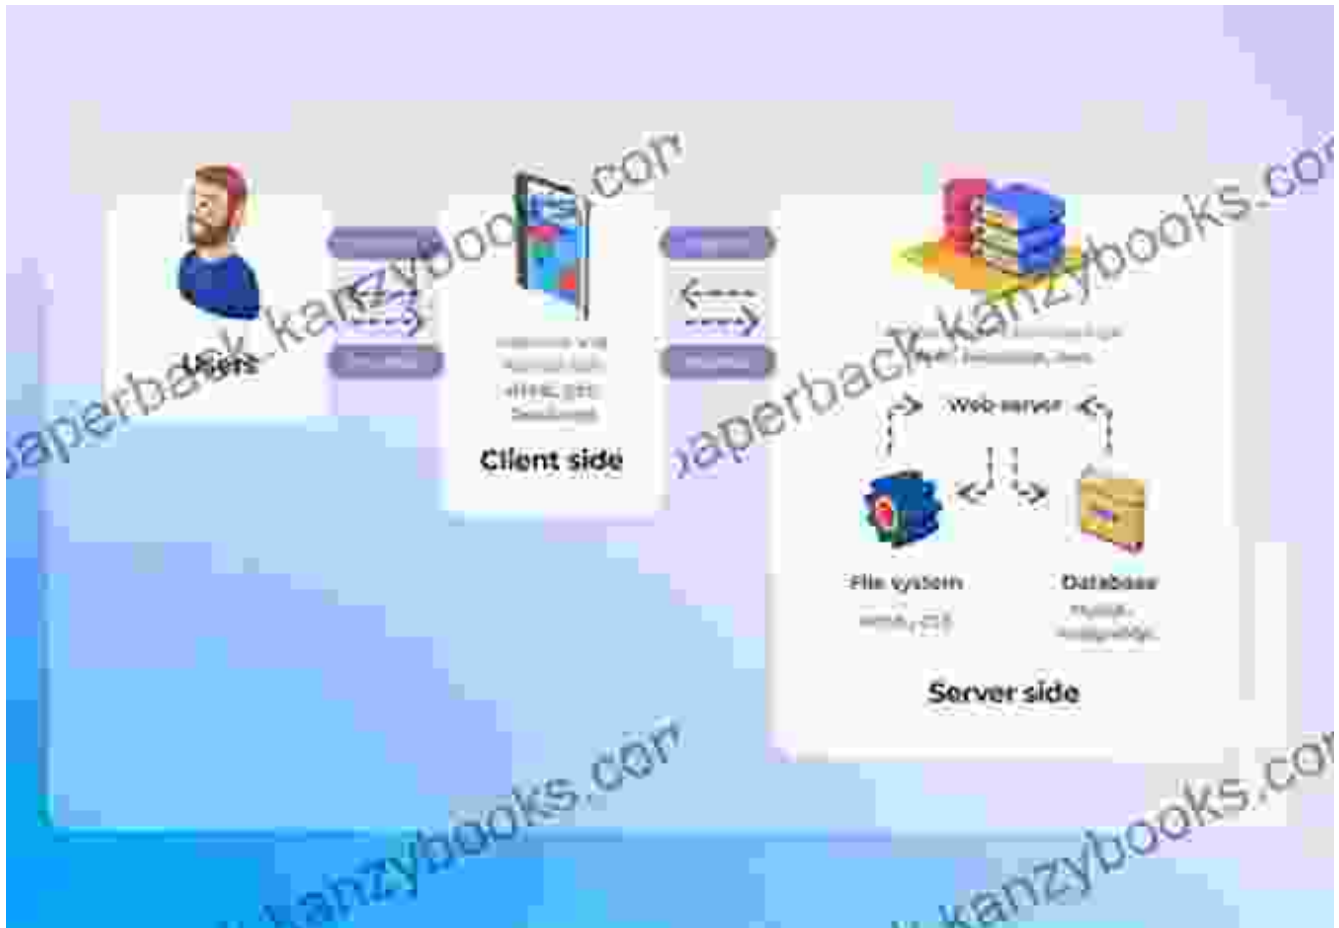

```
lang = ['English', 'Hindi'];
