What is the Herpes Simplex Virus?

Herpes simplex virus (HSV) is a common virus that infects the skin and mucous membranes. There are two main types of HSV: HSV-1 and HSV-2. HSV-1 typically causes oral herpes, while HSV-2 typically causes genital herpes.

HSV is spread through contact with infected skin or mucous membranes. This can occur through kissing, sharing utensils or towels, or engaging in sexual activity.

HSV can cause a variety of symptoms, including:

- Blisters
- Sores
- Pain
- Itching
- Burning
- Tingling

HSV can also lead to more serious health problems, such as:

- Meningitis
- Encephalitis
- Pneumonia
- Death

There is no cure for HSV, but there are treatments that can help to manage the symptoms of the virus. Conventional treatments for HSV include antiviral medications and surgery.
