REHABILITATION IN EMERGENCIES

Emergencies can result in a massive surge in traumatic injuries, for which rehabilitation is an essential component of care.

In emergencies it can be difficult for people to access rehabilitation services

Early access to rehabilitation in emergencies:

- Helps to achieve the best long-term outcomes for the patient

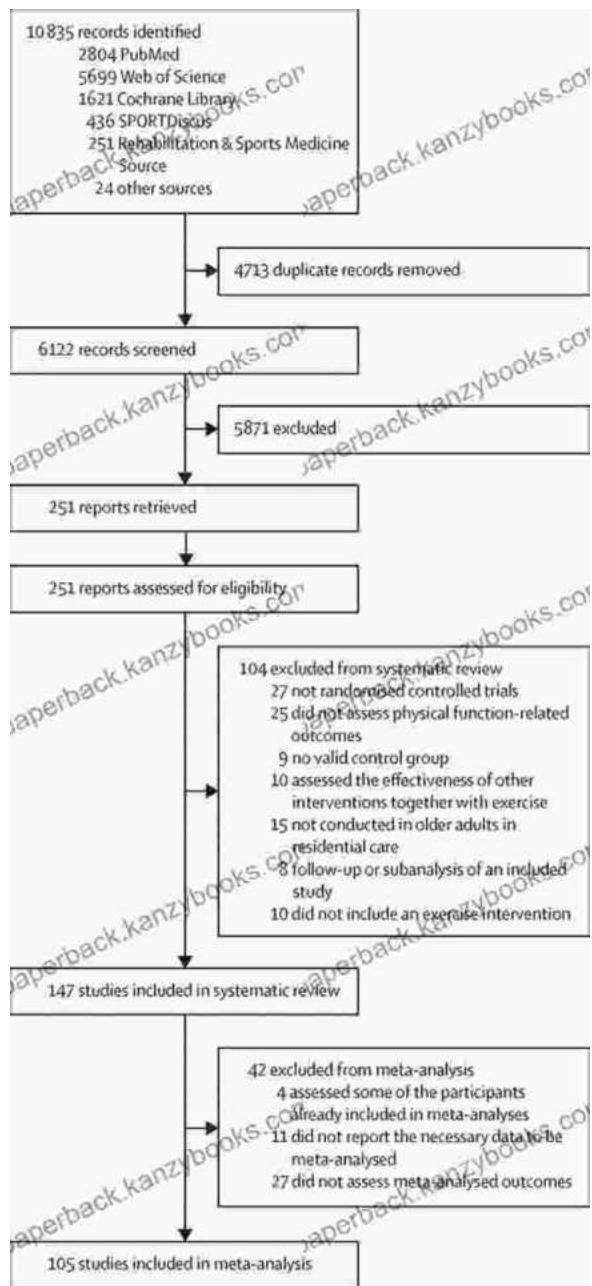

Rehabilitation in the EME:

- Can assist in identifying a patient's needs beyond discharge and refer them to the appropriate services
- Can support a patient to self-manage and continue their recovery after they leave the hospital
